

Semiconductor Devices and Materials

Semiconductors helped usher in the digital age. With advancements constantly being made in the science and engineering behind integrated circuits, protecting innovation in this space is of paramount importance. Haley Guiliano has developed the necessary expertise to assist clients in industries that rely on material science, including semiconductors. Our team has the know-how to understand the chemistry as well as the electrical and the mechanical characteristics inherent to appreciating inventions in this field.

The Haley Guiliano team isn't just adept at the complex technology of materials science. We also have expertise in licensing and transacting in this space, including working with standards essential patents. When we draft patent applications for our semiconductor clients, we do so with an eye towards giving the ensuing patents their greatest value in these contexts.
