Stefan joined Haley Guiliano with a vast amount of experience in prosecuting telecommunication and semiconductor patent applications at the European Patent Office, in addition to experience drafting new patent applications for autonomous vehicles. Stefan is regularly involved in business development and strives to combine his passion for automobiles and green energy with his daily work.

Stefan joined the IP profession in 2017 after completing a degree in physics and philosophy. Prior to that, Stefan spent a considerable amount of time in Kuwait, where, among other things, he led a green engineering project at a local construction company to replace their diesel-powered generators with cleaner and more efficient, solar-powered generators. The project involved developing an affordable prototype solar-powered generator that could withstand Kuwait's extreme weather of 50+°C. Stefan also led a group of engineers to build that prototype.

Stefan recently joined the Porsche Club of Great Britain and enjoys sharing his time with fellow motorists around the country. When he is not in his car, Stefan enjoys learning new hobbies such as inline skating, bouldering, and occasionally playing a jazz tune on his saxophone.

Related Practice Areas

- Patent Preparation and Prosecution
- European Patent Prosecution
- Competitive Landscape Analysis
- Due Diligence
- Opinions
- Freedom to Operate/ Third Party Risk Assessment
- Patent Utilization
- European Oppositions

Related Industries
